Getting Mobile Devices Under Control!

In case you missed it, you can still hear a recording this past week's Webinar: "Getting Mobile Devices Under Control"!

More personally-owned iPads, iPhones, and Androids have made their way into your enterprise after the holidays, getting those devices secured and under control is critically important. Unmanaged, unaudited, and unsecured mobile devices bring risk of data leakage and other mobile threats.

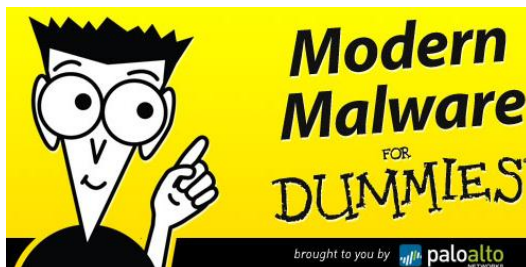

Learn about best practices seminar, watch a short demo, and gain insights into:

- The risks of mobile enterprise access
- Best practices for getting mobile devices under management
- Why device security is no longer enough
- The importance of integrating mobile devices into the enterprise security infrastructure

To view the pre-recorded webinar, go to:

This book provides an in-depth analysis of how today's malware works, and how it has evolved to outpace traditional approaches to security. It examines the evolution of modern malware, a review of modern malware strategies and even outlines the specific actions

and technologies needed in order to regain control over today's malware.

Get the "Modern Malware for Dummies" book to find out:

- How modern malware is used in the lifecycle of an attack
- Why traditional solutions have failed to control this new breed of malware
- Policies enterprises can implement today to reduce their exposure to modern malware

- Why the next-generation firewall is required in order to see, detect and remediate malware in the network

This Month's Product & Services Promotion:

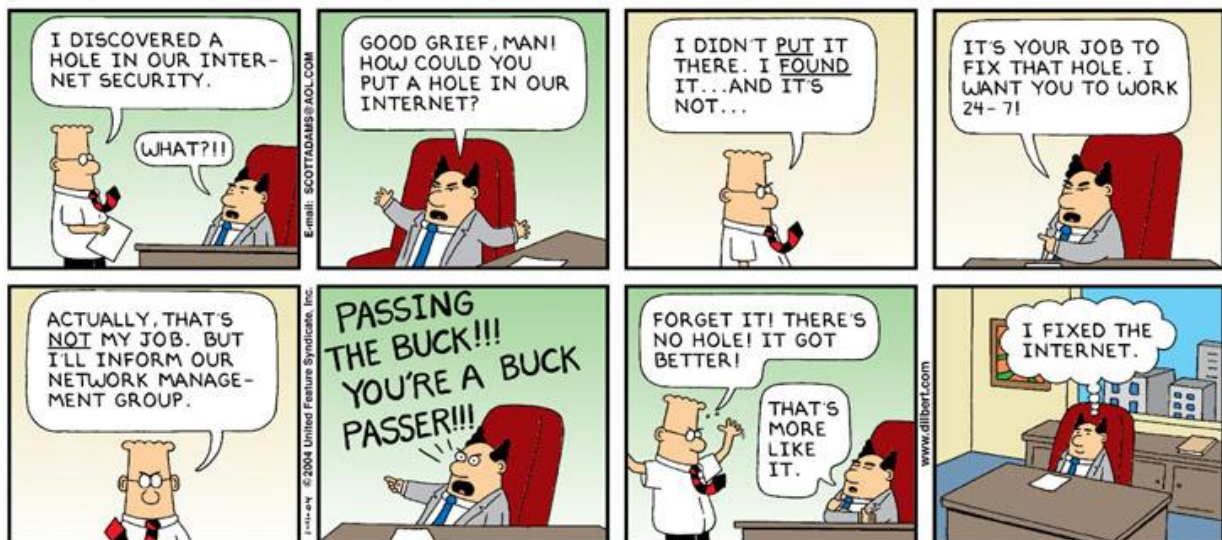

PacketLogic Smart Campus Solutions for Higher Education

IT managers for universities, colleges and other educational institutions operate complex networks designed to serve diverse user groups – students, faculty, staff, and often the surrounding community. These managers need awareness of how their network is being utilized; analysis on what bandwidth is really needed to deliver quality services to their students and faculty, and control over the usage of their valuable network resources. Visibility and control into the usage on peering links is vital, as this is a key cost factor for education, and the ability to set policies based on peering links is critical to cost control. For more information about PacketLogic Solutions, visit:
